The Growing Cybercrime Crisis

Cybercrime incidents are increasing rapidly, yet victims face major barriers in reporting them. Traditional complaint systems are often slow, complex, and inaccessible, especially for people in rural or non-technical backgrounds. Many victims fail to report fraud due to lack of awareness, language barriers, or fear of complicated procedures. This results in delayed action, financial loss, and low recovery rates.

- Data Breaches
- Financial Loss
- Reporting Gap

“Millions of cases go unreported due to complexity and lack of accessibility.”

Rakshak AI

AI-Powered Cybercrime Reporting System

We propose an intelligent voice-based cybercrime reporting system that allows users to report incidents instantly through a simple phone call. The system uses AI to interact in multiple languages, understand user complaints, extract critical details such as fraud type, amount, and transaction data, and generate structured reports in real-time.

This eliminates complexity and ensures fast, accessible, and efficient complaint registration for all users.

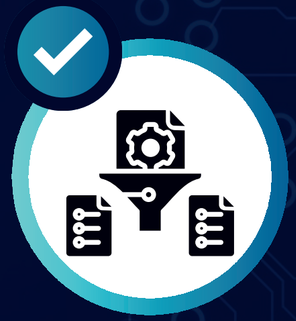

Voice-Based Reporting

Report cybercrime via a simple call—no technical skills needed.

Multilingual AI Interaction

Supports Hindi and multiple languages for wider accessibility.

Intelligent Data Extraction

Captures key details like fraud type, UTR, amount, and location.

Automated Report Generation

Creates ready-to-submit complaint reports instantly.

Rakshak AI

Real – Impact of Our World Solution

Faster Complaint Registration

Report cybercrime instantly via a simple call.

Increased Accessibility

Multilingual support for rural and non-tech users.

Improved Data Accuracy

AI captures structured, reliable information.

Higher Reporting Rate

Easy process encourages more victims to report.

Rakshak AI

Scalable
Future-Ready System

Our AI-based cybercrime reporting system is designed to scale efficiently across regions, users, and platforms. Being cloud-based and modular, it can handle a large number of simultaneous calls while maintaining performance.

The system can be easily integrated with government portals, law enforcement databases, and financial institutions, making it suitable for nationwide deployment.

- Nationwide Deployment
- Cloud-Based Architecture
- Easy Integration
- Continuous Learning AI
